

# Protocol Analyzer for Wireless & IP Networks- PacketScan™

(SIGTRAN - Optional)

## Overview

SIGTRAN protocol decoder software is a VoIP testing tool that permits real-time analysis, call trace, capture, and filtering of SS7 and ISDN signaling messages over IP.

GL's [SIGTRAN](#) analyzer within [PacketScan™- All IP Protocol Analyzer](#) is an optional module (PKV105) available with additional licensing with PacketScan™ analyzer (PKV100).

GL's SIGTRAN analyzer offers powerful features to capture, monitor, decode, and collect statistics of SCTP, and user adaptation (UA) layers such as M2UA, M3UA, M2PA, SUA, IUA, ISUP, MAP, CAP, and INAP.

GL's PacketScan™ - All IP Protocol Analyzer supports monitoring most of 2G, 3G and 4G protocols over IP network such as GSM, GPRS, UMTS, SIGTRAN, and LTE, in addition to SIP, MGCP, MEGACO, Skinny, SCCP, Diameter, and H.323.

For more details, refer [PacketScan™- All IP Protocol Analyzer](#) webpage.

## Main Features

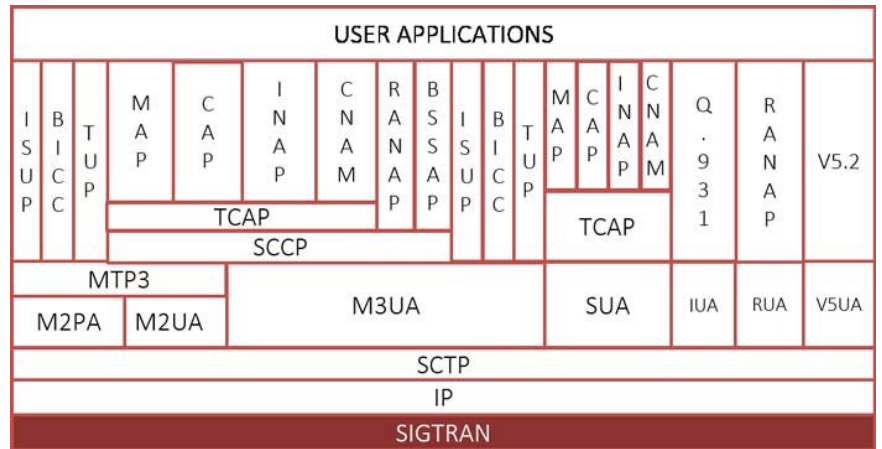

- Permits testing and verification of Signaling Gateways
- Advanced filtering and search based on any user selected protocol fields
- Any protocol field can be added to the summary view, filtering, and search features providing users more flexibility to monitor required protocol fields
- Trigger intelligent actions based on signaling and traffic conditions
- Support for Multi-technology, Multi-protocol
- Displays Summary, Detail, Hex dump, Statistics, and Call Detail Views
- Hex dump View displays the frame information in HEX and ASCII format, the contents of this view can also be copied to clipboard
- Statistics View displays statistics based on frame count, byte count, frames/sec, bytes/sec etc for the entire capture data
- Call Detail View displays called/ calling number, released calls, call status, and more
- Provides a consolidated interface for all the important settings required in the analyzer. All the configuration settings done in any of these options can be saved to a file, loaded from a configuration file
- Supported on Windows® 10 and above operating system

## Summary and Detail View of SS7 SIGTRAN

User can select a frame in Summary View to analyze and decode each SS7 SIGTRAN frame in the Detail View.

The detail view of SS7 SIGTRAN call displays the following:

- MAC Layer
- IP Layer
- SCTP Layer
- MTP3 Layer
- ISUP Layer

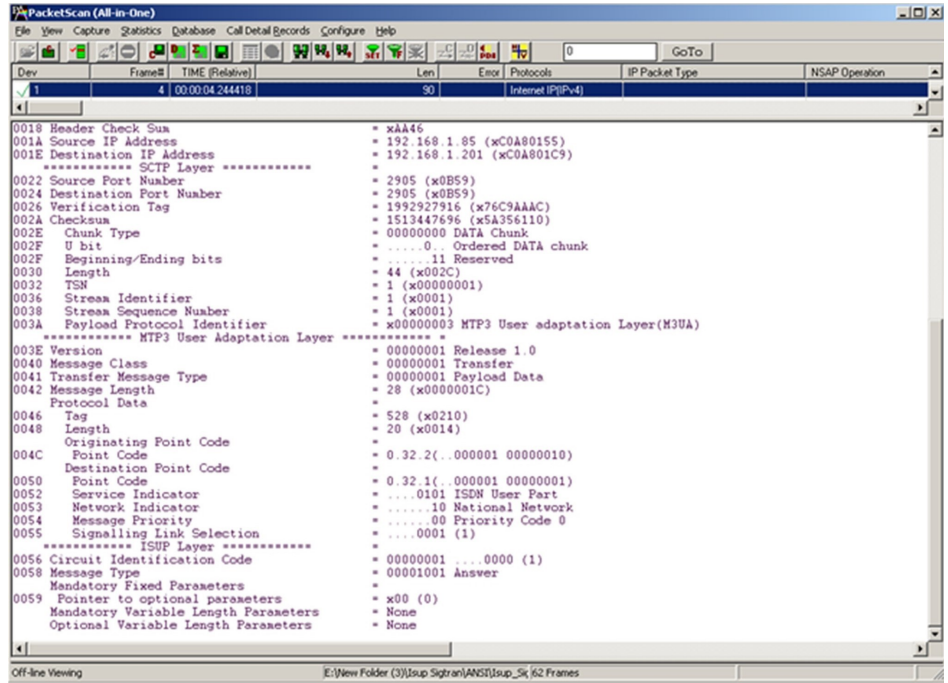

Figure: Detail View of SS7 SIGTRAN

## Summary and Detail View of ISDN SIGTRAN

User can select a frame in Summary View to analyze and decode each ISDN SIGTRAN frame in the Detail View.

The detail view of ISDN SIGTRAN call displays the following:

- MAC Layer
- IP Layer
- SCTP Layer
- ISDN Q.921 user adaptation Layer
- Q.93x-Layer 3

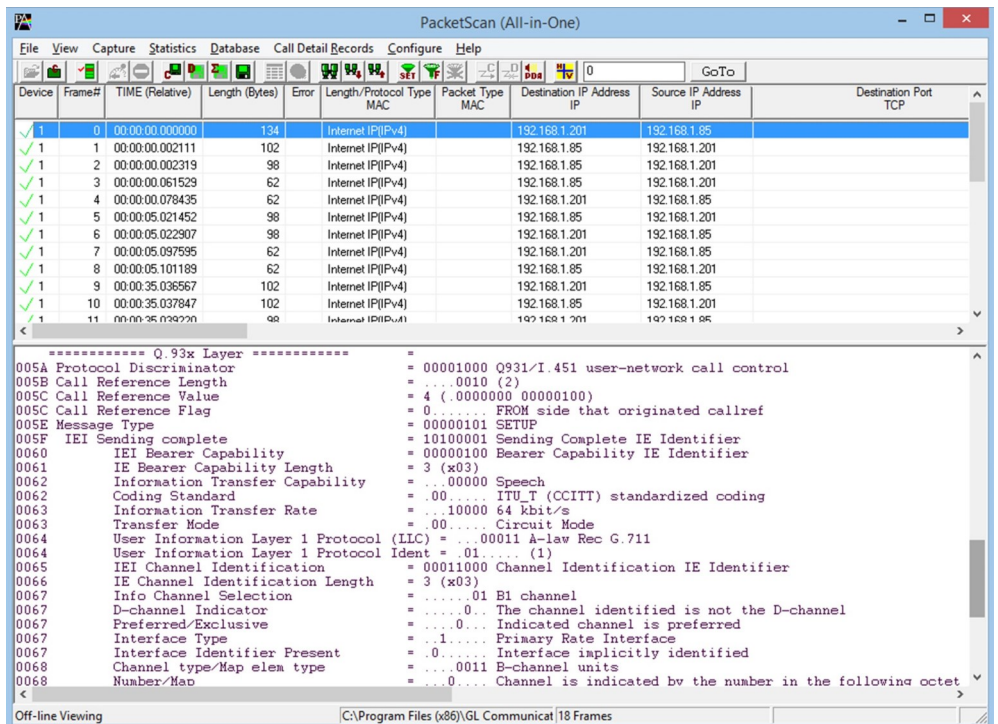

Figure: Detail View of SS7 SIGTRAN

## SIGTRAN Call Detail Records

Call Detail Records view of SS7 and ISDN SIGTRAN calls over IP displays the following fields - Call ID, Call status, Protocol, Call Originating (Number/Address), Call Destination (Number/Address), Call Start Date & Time, Call Duration, and Protocol Specific Information.

The figure consists of two screenshots of the PacketScan (All-in-One) application. The top screenshot shows the 'Call Detail Records' view for SS7, displaying a table with columns: Device, Frame#, TIME (Relative), Length (Bytes), Error, Length/Protocol Type MAC, Packet Type MAC, Destination IP Address, Source IP Address, Destination Port, and Source Port. The bottom screenshot shows the 'Call Detail Records' view for ISDN, displaying a table with columns: Call ID, Call Status, Protocol, Call Originating (Num...), Call Destination (Number / A...), Call Start Date & Time, Call Duration, and Protocol Specific Info.

## INI Decode Options

The .INI file configuration enables the user to enter the required custom value for each protocol in the PacketScanProt.ini file (located in Program Files\GL Communication Inc) to get proper decodes. For SIGTRAN protocols, the following options can be edited to customize the way the PacketScan™ decodes SIGTRAN protocols.

- SIGTRAN standards – ITU or ANSI
- MAP Protocol Version – R99 or R4
- INAP Protocol Version – CS1 or CS2
- CAMEL Protocol Version – Rel6 or Rel3
- BTNR Protocol Identifier - TUP or IUP
- Maximum and Minimum SSN value for INAP in ITU, ANSI and ETSI
- Call Trace Type – TCAP MAP or TCAP CNAM

```

## SIGTRAN Statistics

The statistics are calculated based on the SIGTRAN protocol fields. The figure below depicts statistic data based on message types of SS7/ISDN SIGTRAN protocol decodes in PacketScan™.

## Network-Wide Monitoring of SIGTRAN Network

GL's NetSurveyorWeb™ is a web-based client that can connect to SIGTRAN protocol analyzer probe for monitoring the entire SIGTRAN network through a web server that facilitates display of call data records, protocol frames, and KPIs. This system allows you to deploy multiple SIGTRAN Analyzer probes to be deployed at strategic locations in a network, transmit and collect voice, data, protocol, statistics, and performance information, and relay this information to a central / distributed network management system (NMS).
